

Report on the activities of the I.A.G. Working Group “Tectonic Geomorphology” during the EGU General Assembly (Vienna, 27 April – 02 May 2014)

The Session “Intermontane basins: key sites for multidisciplinary approaches to decrypt tectonically active landscapes”, organized by the I.A.G. Working Group “Tectonic Geomorphology”, was successfully held during the EGU General Assembly. Both the Oral and the Poster sessions were followed by many distinguished researchers interested in the topic.

On the occasion of the General Assembly the WG members attending the event met to discuss on the WG organization and its future initiatives.

Prof. Monique Fort, President of the Groupe Français de Geomorphologie and Emeritus of the Université Paris7 (fort@univ-paris-diderot.fr), was nominated co-chair of the WG.

Prof. José Vicente Pérez Peña Profesor de Geología, Universidad de Granada, (vperez@ugr.es) was nominated Secretary.

The WG will organize a specific session during the upcoming IAG Regional Conference “Gradualism vs catastrophism in landscape evolution” (July 02-04, 2015, Barnaul, Russia)

A workshop, specifically addressed to young generation of researchers, will be organized in Italy on 2016.

The Chairs

Paola Fredi
