

Andean Geomorphology Working Group

Past activities:

During the last 6 months, since the working group was accepted, we carried out the following activities:

- We have held the first meeting to organize the activities of the working group in November 2022.
- We promote the creation of the working group and we invite different colleagues from Chile and Argentina to join our group through the Asociación Argentina de Cuaternario y Geomorfología and the Sociedad Chilena de Geomorfología.
- We had the first contact with the Editor in Chief of Journal of South America Earth Science to publish a special issue tentative titled “Andean Geomorphology”. The Journal expressed interest in our proposal. So, we started to elaborate a list of possible authors to send their contributions to the special issue.
- We started the organization of a webinar about recently studies on Andean Geomorphology of Patagonia. Probably, this meeting will be held in May and we’ll invite 4 to 6 young researchers to present their research.

Forthcoming activities:

- To edit the special issue tentative titled “Andean Geomorphology” in the Journal of South America Earth Science. The Guest Editors of the special issue will be Dr. Juan Federico Ponce (WG Chair), Dr. José Araos (WG Secretary) and Dra. Laura Perucca (member of WG);

- Hold a webinar about Andean Geomorphology of Patagonia during May of 2023;
- To organize a field trip about the Andean Geomorphology (Argentina-Chile geomorphological transect).
