IAG Regional Conference on Geomorphology

“Geoheritage and Geodiversity”

Cappadocia, Türkiye, 12–14 September 2023

IAG Intensive Course for Young Geomorphologists

“High Resolution Mapping and Cosmogenic Dating of Fluvial Landforms”

Cappadocia, Türkiye, 15–16 September 2023

Report

Bruno Henrique Abatti

*Federal University of Rio Grande do Sul, Brazil
bruno.abatti@gmail.com*

I had the pleasure of participating in the Regional Conference on Geomorphology, held in Nevşehir, Turkey, from September 12th to 14th, 2023, as well as the Intensive Course for Young Geomorphologists that followed, taking place on September 15th and 16th of the same year. This opportunity was only made possible through the grant support provided by the event organizers and the International Association of Geomorphologists (IAG).

My participation in the Regional Conference on Geomorphology was a profoundly enriching experience, both in the scientific and personal realms. During the event, I had the opportunity to acquire new knowledge and insights on various topics related to geomorphology. The conference also proved to be an ideal environment for meeting new researchers and exploring potential future collaborations. I highlight my participation in the fluvial geomorphology session, where I delivered an oral presentation. This challenge was extremely enriching, allowing me to enhance my scientific communication skills and receive valuable feedback that will undoubtedly contribute to the improvement of my research.

Following the conference, I took part in the Intensive Course for Young Geomorphologists. The course was divided into two main parts. In the first stage, we received theoretical training on High Resolution Mapping and Cosmogenic Dating of Landforms. In the second part, we applied this knowledge in the field. The course proved to be instrumental in expanding my network in the field of geomorphology, providing a welcoming environment conducive to the exchange of experiences and ideas with fellow young geomorphologists. I especially highlight the class on Cosmogenic Dating of Landforms, which pleasantly surprised me, given my limited previous knowledge on the topic. The course instruction was notably effective and informative.

It is important to emphasize that the Regional Conference on Geomorphology and the Intensive Course for Young Geomorphologists represented a significant milestone in both my scientific and
