I am deeply honored to have received an International Association of Geomorphologists (IAG) grant, which enabled me to participate in the II European Young Geomorphologists Meeting, held across Italy, Slovenia, and Croatia from June 25 to 27, 2026.

This meeting was an exceptional opportunity for early-career researchers to exchange innovative perspectives on geomorphological processes, coastal dynamic landscape evolution, and scientific methodology.

Scientific Activities & Key Highlights

Presentation & Knowledge Exchange: During the meeting, I had the valuable opportunity to present my research focusing on coastal geomorphology, submerged harbor environments, and geoarchaeological hazards. The interactive sessions provided highly constructive feedback from mentors and senior international geomorphologists.

Field Excursions: *The transboundary field trips across the diverse landscapes of Italy, Slovenia, and Croatia offered invaluable practical insights. Observing Karst landforms and dynamic coastal geomorphological processes firsthand enhanced my understanding of spatial modeling and long-term coastal change.*

Networking & International Collaboration: *The informal atmosphere fostered fruitful discussions with fellow young scientists across Europe. These interactions paved the way for potential multidisciplinary collaborations combining coastal geomorphology, remote sensing, and heritage preservation.*

Acknowledgments

International Association of Geomorphologists

I would like to express my sincere gratitude to the International Association of Geomorphologists (IAG) for providing the financial support that made my attendance possible. My appreciation also goes to the organizing committee for hosting such a seamless, high-level scientific event across three countries.
