

IAG WGs Annual Report

Past activities (*max. 1 page*)

Provide a list of the main activities and/or events led by the WG since the last Annual Report, accompanied by a short description of the event and a photo/illustration if possible. Activities/events could include: conferences/lectures/workshops/meetings organized, sessions or field trips organised or chaired at international or regional conferences/workshops, WG meetings, books/special issues published and any other items that are relevant to the objectives of the WG.

During 2025-2026, we have organized a session at the IAG Regional Conference on Geomorphology 2025, Romania. Our session in IAG Regional Conference on Geomorphology 2025 (Romania), has received 13 abstracts with 8 oral presentations and 5 posters.

During the conference, more than 30 people attended the session. Attendees also had the opportunity to experience virtual fieldtrips through VR headsets.

Future activities (*max. 1/2 page*)

List of the main activities or events planned by the WG for the year ahead. You may want to include links to a registration form, your own website or social media, in order to advertise your events (e.g. conferences, workshops).

Our future planned activities involve the organization of hands-on laboratories focused on Virtual Field Trips (VFTs) in the framework of the IAG DENUCHANGE Workshop, that will take place during 6-9 October 2026, at Naxos, Greece. These interactive sessions will provide participants with practical experience in the design and application of VFTs for geomorphological research and education. Participants will also have the opportunity to use VR headsets to explore immersive examples of VFTs firsthand. The labs aim to foster active collaboration between members of the two Working Groups.

We maintain two social media channels, to advertise and promote all activities of our WG:
